Mateus M. Furquim Mendonça

Machine Learning and Software Engineer

@ *mfurquimdev@gmail.com*   git mfurquimdev   in/mfurquimdev   mfurquim.dev   Brazil

Professional Summary

Highly skilled software engineer with over 9 years of experience and a diverse background. Committed to team growth and innovation through effective mentoring and collaboration. Strong problem-solving skills with a passion for delivering high-quality software solutions.

Work Experience

In this report, we will explore the various factors that influence fluid dynamics in glaciers and how they contribute to the formation and behaviour of these natural structures.

3. The geology

The equation $Q = \rho Av + C$ defines the glacial flow rate.

The flow rate of a glacier is defined by the following equation:

$$Q = \rho Av + C$$

The flow rate of a glacier is given by the following equation:

$$Q = \rho Av + \text{time offset}$$

Total displaced soil by glacial flow:

$$7.32\beta + \sum_{i=0}^{\nabla} \frac{Q_i}{2}$$

Total displaced soil by glacial flow:

$$7.32\beta + \sum_{i=0}^{\nabla} \frac{Q_i(a_i - \varepsilon)}{2}$$

$$v := \begin{pmatrix} x_1 \\ x_2 \\ x_3 \end{pmatrix}$$

$$a \rightsquigarrow b$$

Number: 3

$-x$ is the opposite of x
